

Marie at MISAN Jewellery creates bespoke wedding rings and alternative engagement rings

Create your perfect ring

Your wedding ring is more than a piece of jewellery.

It's a symbol of your love and commitment and will become a part of you.

It is important that it fits your style and personality.

QUICK LOOK

Size

Not only is it important to get the right ring size - the width and the height of the ring will make a difference in how it feels on your hand.

The wider the band the larger your ring size will need to be for a comfortable fit.

Profile

The profile essentially means the shape of the ring. There are numerous profiles to choose from with a slight different look and feel.

Texture

Classic smooth to heavy texture and anything in between. The options are endless and completely down to what speaks to you.

Choose your metal

Choose your profile

D-Shaped	Flat on the inside, curved on the outside		
Traditional Court	Curved on the inside and outside		
Flat	Flat on the inside and outside; flat sides		
Flat-Court	Flat on the outside, curved on the inside		
Double-Comfort	Curved and rounded edges		
Halo	Circular profile		
Flat-Sided Court	Curved on the inside and outside with flat edges		

Choose your size

Width in mm
Height in mm
Ring size

The easiest way to get this right is to be measured by a jeweller. Most stores and makers are more than happy to do this for you. Alternatively I recommend getting a multisizer online, they are easy to use and affordable.

The carat tells you the amount of fine metal in the alloy. A high carat has a high pure gold content. However, that does not mean you should automatically go for a higher carat. Alloys are mixed to make jewellery more durable, a high carat makes a soft metal and your ring will be more likely to be dented or misshaped with wear. For durability we recommend you go no higher than 18ct.

Choose your texture

Sand cast

Sand casting is an ancient process that produce beautifully organic textures.

A master ring is made in wax to your specifications. A mould is then made in sand, how hard the sand is packed will alter the texture on the ring. For an extra personal touch these rings can be made using recycled gold from family jewellery or the mould can be made with sand from your favourite beach.

- Heavy texture
- Sterling silver
- Oxidised to bring out details

- Satin finish
- Sterling silver

- Cast with volcanic sand provided by the couple
- Oxidised line detail

- Cast in gold from the couples family

Wax carved

Wax carving is a great process, it allows you to create textures and shapes which would be difficult to accomplish through forging metal.

- Flat court profile
- Satin finish
- Lined texture
- 9ct White Gold

- Soft geometric texture
- Matte finish
- High polish inside
- Flat court profile

- Heavy textured Melted effect
- D-shaped profile
- 9ct yellow gold

- Heavy textured Melted effect
- Flat profile
- Sterling silver

- Soft Melted effect
- Flat-sided court profile
- 9ct yellow gold

Classic

A timeless favourite. Works well with any finish. Small details like stones or engravings can easily be added.

- Matte finish
- 9ct White Gold
- Double Comfort profile

- Traditional court profile
- High polish finish

These are for inspiration only and are by no means the only styles we can make for you.

...And remember, your rings don't have to match.

Add some sparkle

Moissanites

Moissanites are lab made stones equivalent to diamonds in strength and sparkle. A great ethical option for a clear stone.

Black diamonds

Black diamonds are real natural diamonds with lots of graphite inclusions. They are often colour enhanced through heat treatment.

Rough diamond

These are uncut or half cut diamonds with organic shape. Less reflection than a cut stone but with lots of personality.

Salt & Pepper diamonds

Just like with black diamonds the salt & pepper diamonds feature lots of tiny inclusions and 'imperfections'. The inclusions create gorgeous patterns and make the stones truly unique. You won't find two salt & pepper diamonds that are the same, colours scale from cloudy white to perfectly clear with sharp black spots.

Engraving

For an extra personal touch some opt to have the wedding date and or their partners name engraved on the inside of the ring. This can easily be arranged for you.

Pricing

Prices are subject to fluctuating gold prices. As soon as I have details of sizes and preferred metal I will be able to give you an accurate quote.
